

OIL RECORD BOOK USERS GUIDE

Summary

This document provides a detailed guide for accessing and using the **eLogs** electronic record-keeping system, including account setup, PIN and signature creation, and making entries in the **Oil Record Book** for machinery space operations – i.e., the **Machinery Space** module.

- User accounts and access methods: Two test user accounts are created with passwords, and **eLogs** can be accessed via the **UAT RD** Web page or directly through site-specific URLs, preferably using a Chrome browser. Login requires NSE credentials.
- Initial PIN and signature setup: Upon first login, users must reset or create a PIN and save their signature to avoid repeated signing for each record update. This is done via “**Account Settings**”, with instructions for both new and older accounts.
- Saving and using signature: After creating the signature, users must save it to avoid signing repeatedly. When submitting records, users enter their PIN to apply the saved signature.
- **eLogs** dashboard and module navigation: The document shows the MARPOL Books dashboard and guides users to select the **Oil Record Book Part I** for machinery space operations to make log entries.
- Creating daily log entries: Users click the **Create (+)** button to enter daily logs, ensuring all mandatory fields (underlined in red) are completed for submission.
- Entry details and time format: Entries require selecting record date and category, with times entered in military format using GMT and local time. Optional tank details can be specified regarding ballasting.
- Viewing vessel status: Users can view the vessel’s last known operational or engine status from the entry screen, useful for rigs or offshore vessels.
- Categories for record entries: Various categories are available for specific record types including dirty ballast discharge, oil residues, bilge water discharge, oil filtering equipment condition, accidental oil discharges, bunkering, and general remarks. Location details are required for some entries.
- Attachments and record submission: Users can upload attachments in several file formats, save drafts, and enter officer details and signature PIN (necessary to submit records). Drafts can be deleted before final submission.

OIL RECORD BOOK USERS GUIDE

Introduction

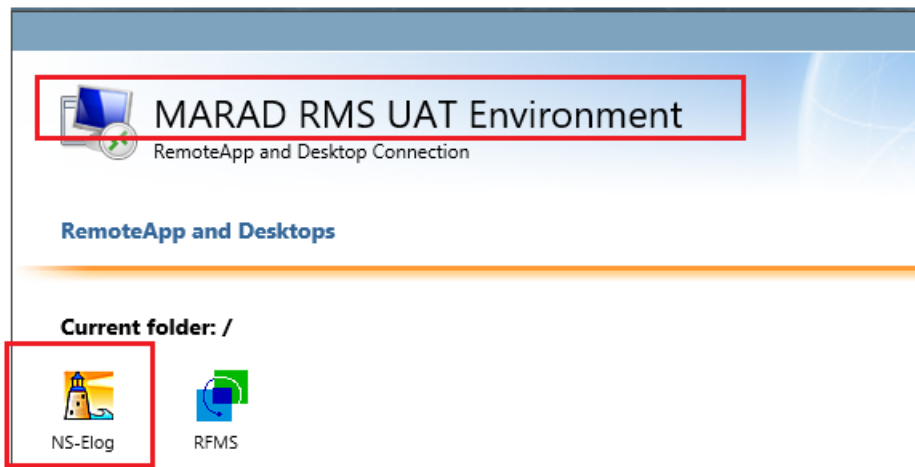

To explore **eLogs**, you may log in with the dummy user accounts **shipuser1** (Management level officer) and **shipuser2** (Operational level officer). Password **marad1234**.

User List		
File Help		
Name	Authorization Profile	User Id
ShipUser1	MANAGEMENT LEVEL OFFICER	shipuser1
ShipUser2	OPERATIONAL LEVEL OFFICER	shipuser2

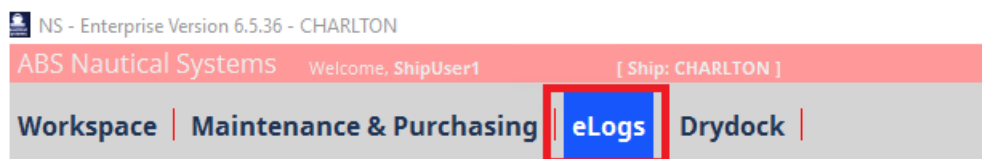

Accessing eLogs: This can be done in 2 ways.

1. Open the UAT RD Web page:
<https://marhsawas908.ad.dot.gov/RDWeb/Pages/en-US/Default.aspx>
2. Click on the NSA-E log remote app to launch the app.

For purposes of this guide we will use the first option with following steps:

3. Login to the NSE instance using your NS Account credentials.
4. Click on the **eLogs** Module to open the module.

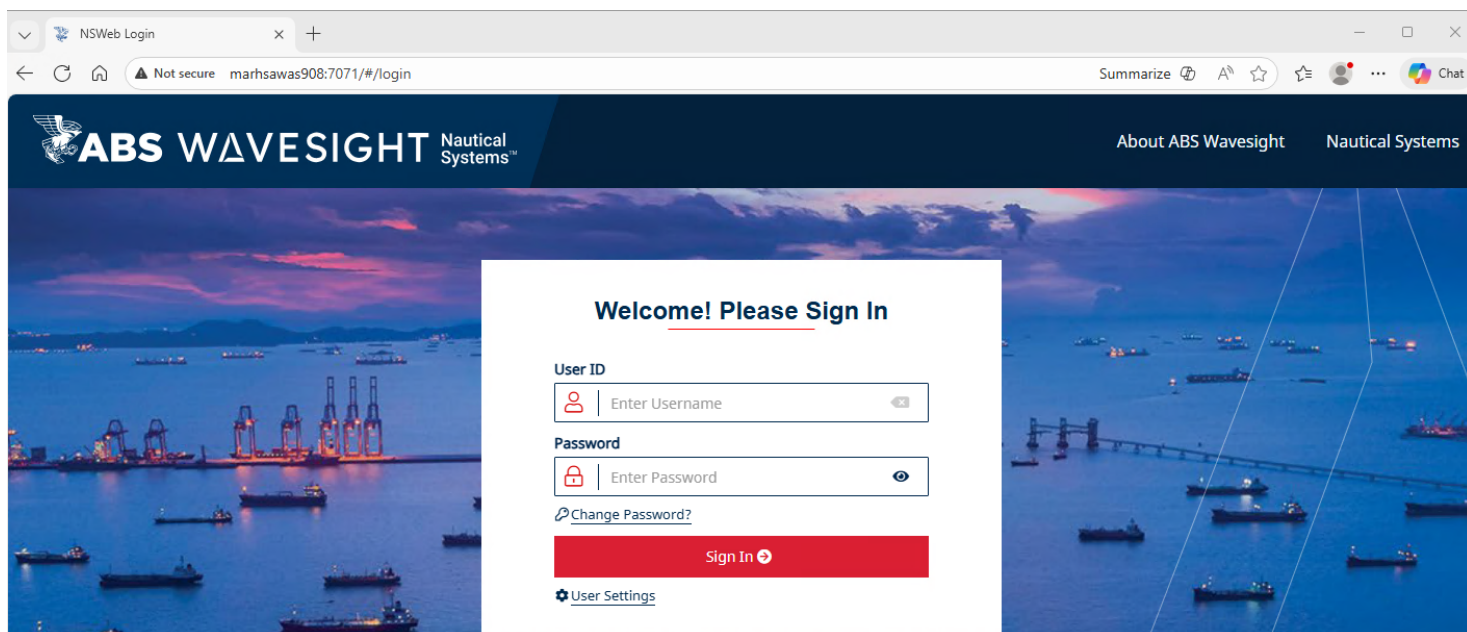

5. That will open the **eLogs** module on MS Edge browser. **eLogs** is a web-based module and it will be accessed from a browser only.

The other option to access **eLogs** is by directly opening the **eLogs** URL from a browser. The URLs are different for each site because the host's name is part of the URL. For testing, access **eLogs** by opening the URL: <http://marhsawas908:7071/#/login> from a browser. (**eLogs** works better if the Chrome browser is used). Once at the login page, use your NSE Credentials to log in.

OIL RECORD BOOK USERS GUIDE

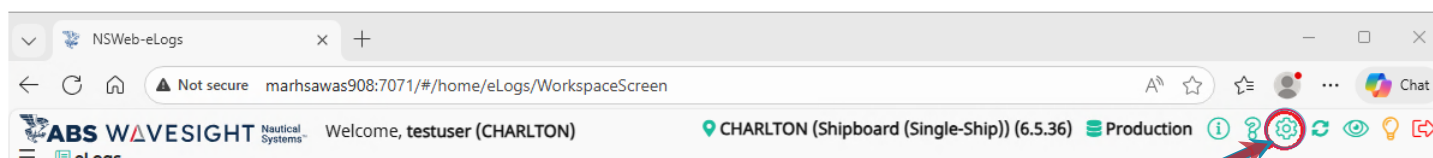

Login

After login, the user selects **change/Create PIN** and creates a signature.

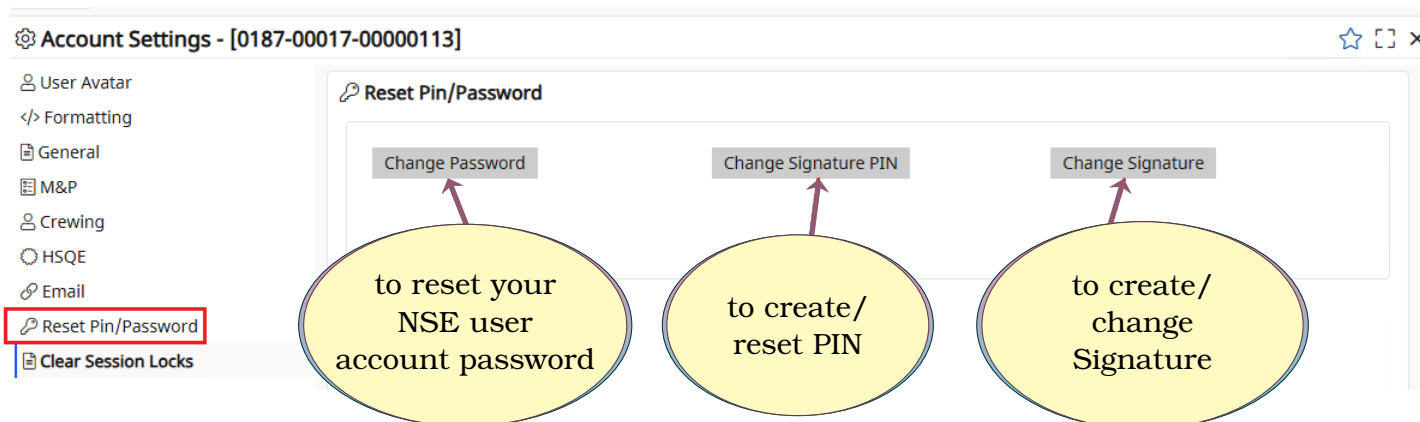

If a signature is not saved, the user will need to create the signature each time, submitting an update. We are using test account **test user 1** or **test user 2** and password **marad1234** to capture the process of creating/resetting a PIN and Signature.

1. After login to **eLogs**, click on **Account settings** located at the top-right of the page:

Account Settings

2. On the user account settings page, click the **Reset Pin/Password** button and update your user PIN and Signature

OIL RECORD BOOK USERS GUIDE

3. If the user has an existing PIN (this applies recently created NSE accounts), the system will prompt the users to enter the **current Signature PIN**, **New Signature PIN**, and **Confirm Signature PIN**. If the user does not have an existing PIN (this applies for older NSE accounts), the system will prompt users to enter a **New Signature PIN** and **Confirm Signature PIN**. Type the new PIN, Confirm the new PIN, and **"Save"** to apply the change.

4. Log out of eLogs to apply the PIN update.
5. After login to eLogs, go to Accounts Settings. Select **Reset Pin/Password/Change Signature** to create your signature. At this point the system will prompt the user to enter the PIN number. Enter the PIN created and click **"Ok"**.
6. A box will open for the user to upload or sign a signature. Click the **"Upload"** option to use an existing signature that is saved locally on your computer. Use the mouse to create your signature and click **"Save"** to apply the update. The **"Clear"** option is to delete an existing signature.

Sign or upload your signature

Upload Clear

Save Cancel

OIL RECORD BOOK USERS GUIDE

7. Click on **Save & Close** to close Account Settings.
8. Saving the Signature is important, or the user will need to sign the signature each time submitting a record update. Below is an example: when the user clicks on **"Sign"** the signature window with an already existing signature will open. Enter the PIN and click **"Ok"** to complete submitting the record update.

The screenshot shows the 'CHARLTON: DECK LOG BOOK' application window. At the top, there are tabs for 'eLogs' and 'Book'. Below the tabs is a section titled 'Update record book entry'. The main area displays a 'Departure' form with fields for Date (01-Feb-2026), Voyage No. (# 0001), From Port (Durrës (Durazzo), Albani), From Berth, To Port (Sarandë, Albania), and To Berth. Below the form is a navigation bar with various icons and a 'Sign' button. The 'Sign' button is highlighted, and a modal dialog titled 'Enter Your Pin Number' is open, showing a 'Pin Number' field with the value '1111' and 'Ok' and 'Cancel' buttons. In the background, a signature window is visible with a signature and 'Restore' and 'Clear' buttons.

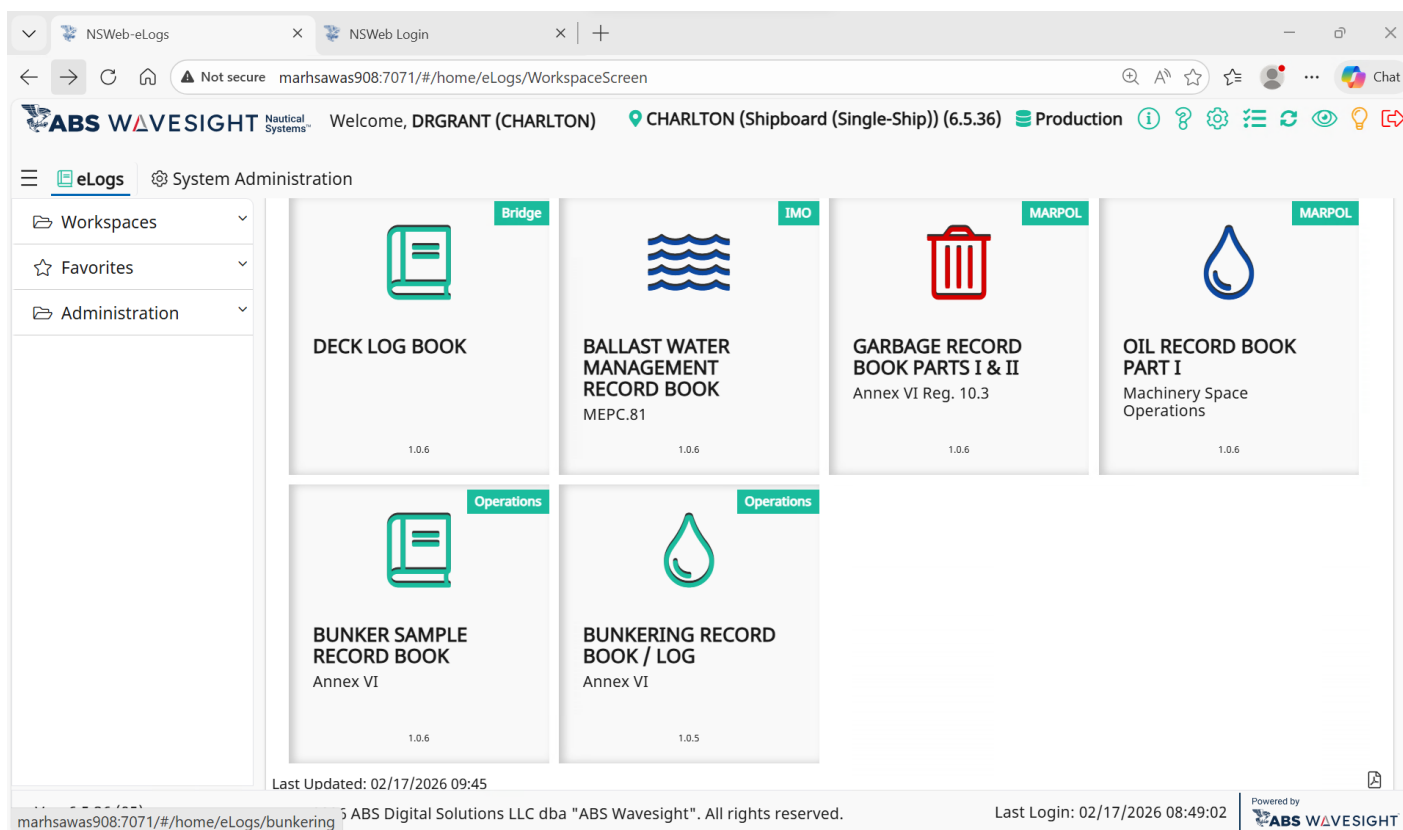

9. This is number 9 E-log dashboard MARPOL BOOKS:

The screenshot shows the 'ABS WAVESIGHT' eLogs dashboard. The top navigation bar includes the ABS WAVESIGHT logo, user information (Welcome, DRGRANT (CHARLTON)), and system information (CHARLTON (Shipboard (Single-Ship)) (6.5.36) Production). The left sidebar contains a menu with 'eLogs' and 'System Administration'. The main content area displays several status bars: 'Awaiting Verification' (1 Pending Verification, 0 Reverification), 'Awaiting Acknowledgement' (Nothing to acknowledge), and 'Awaiting Submission' (Nothing to submit). Below these are sections for 'Electronic Record Books (eLogs)' with tabs for Bridge, IMO, MARPOL, and MARPOL. The footer shows the version (Ver. 6.5.36 (95)), copyright (© 2026 ABS Digital Solutions LLC dba "ABS Wavesight". All rights reserved.), last login (Last Login: 02/17/2026 08:49:02), and the ABS WAVESIGHT logo.

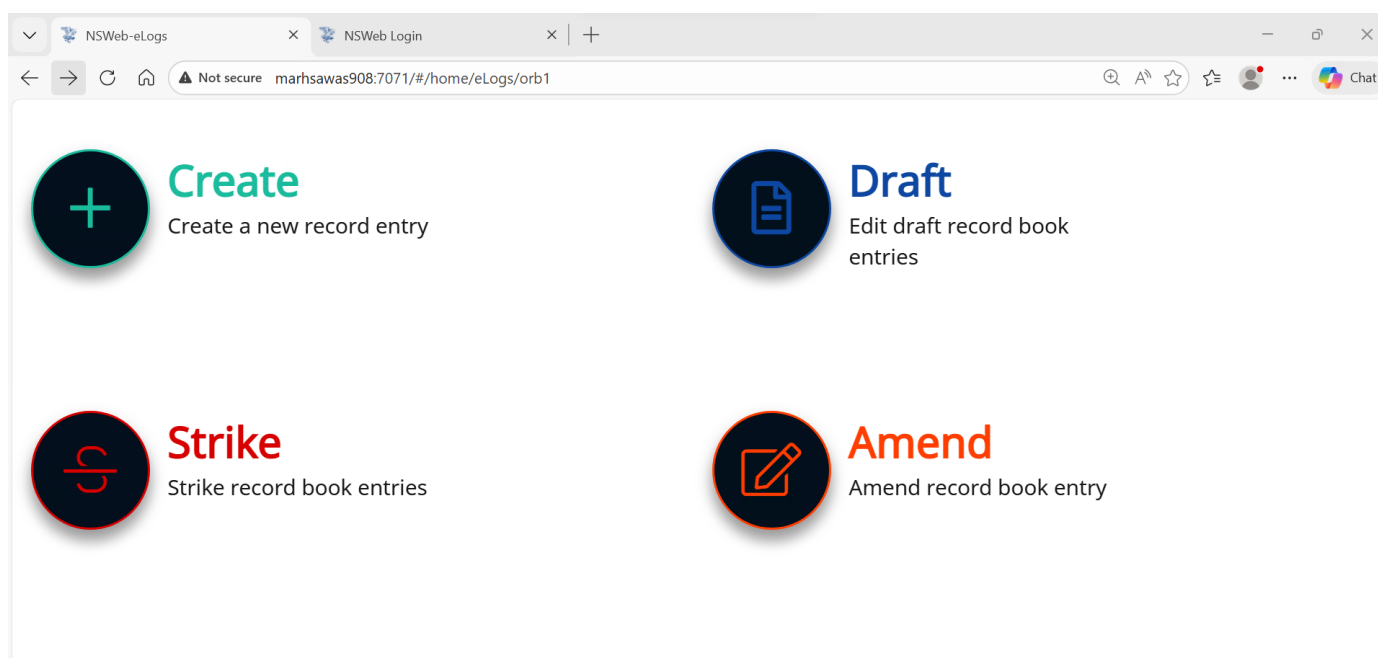

OIL RECORD BOOK USERS GUIDE

10. This is the oil record book dashboard. The icons are active: you click on them to make log entries as needed.

- From the dashboard page please select the **"OIL RECORD BOOK PART 1"** option:

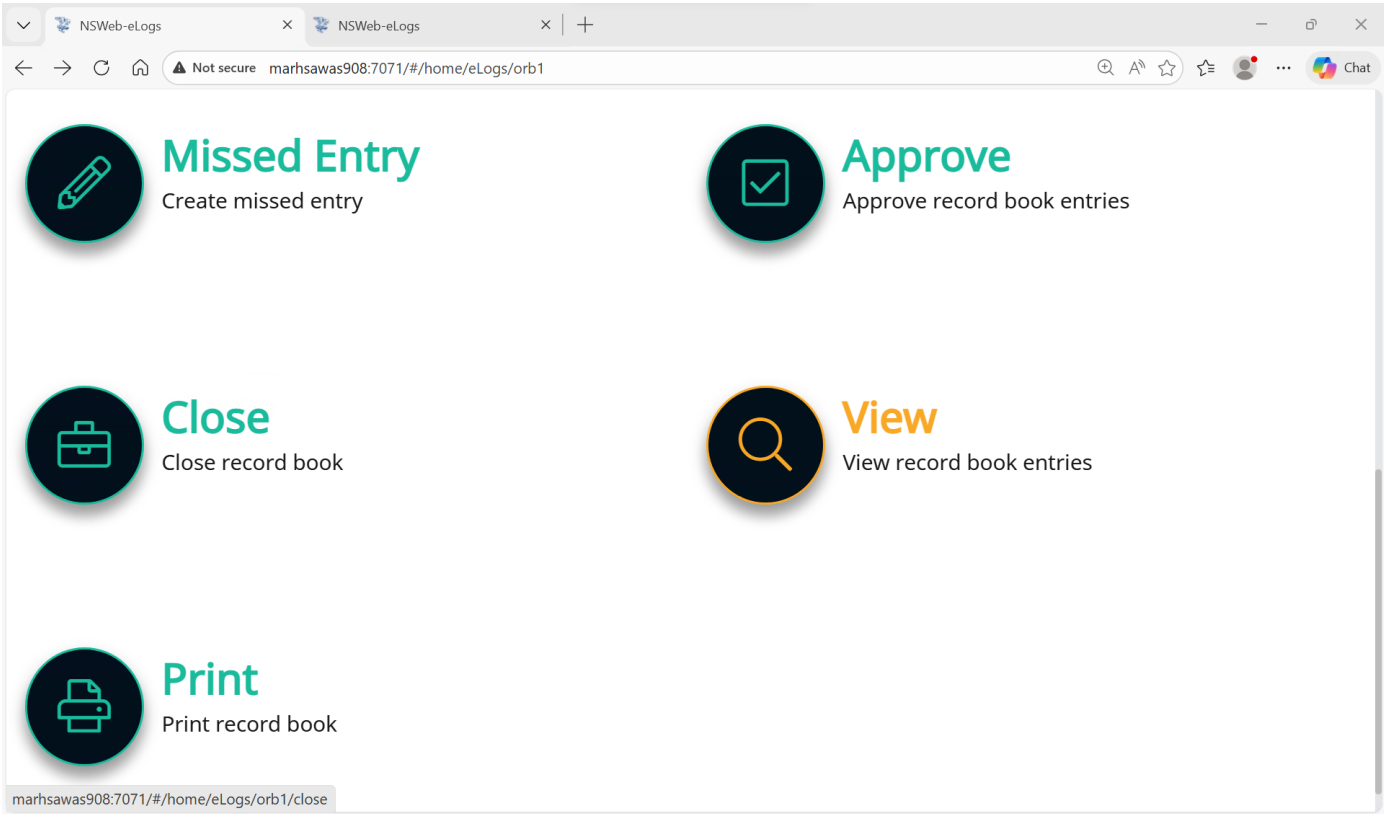

11. This is the Input Data Selection page/action operation page.

OIL RECORD BOOK USERS GUIDE

The different buttons allow you to create, print, view, modify, and strike (delete) record book entries, among other actions.

12. Click on the **Create (+)** button to record your daily entries. You will then be taken to this page: the “Oil Record Book” template.

- Entries that are underlined in red are mandatory and must be completed for submission of the eLogs record.
