

OIL RECORD BOOK USERS GUIDE

I have created users accounts **shipuser1** (Management level officer) and **shipuser2** (Operational level officer) for testing. Password **marad1234**.

User List		
File Help		
    		
Name	Authorization Profile	User Id
ShipUser1	MANAGEMENT LEVEL OFFICER	shipuser1
ShipUser2	OPERATIONAL LEVEL OFFICER	shipuser2

Accessing eLogs: This can be done in 2 ways.

1. Open the UAT RD Web page.
2. Click on the NSA-E log remote app to launch the app.

For purposes of this guide we will use the first option with following steps:

3. Login to the NSE instance using your NS Account credentials.
4. Click on the **eLogs** Module to open the module.

5. That will open the **eLogs** module on MS Edge browser. **eLogs** is a web-based module and it will be accessed from a browser only.

The other option to access **eLogs** is by directly opening the **eLogs** URL from a browser. The URLs are different for each site since the host's name is part of the URL. For testing, access **eLogs** by opening the URL: <http://marhsawas908:7071/#/login> from a browser. (**eLogs** works better if the Chrome browser is used). Once at the login page, use your NSE Credentials to log in.

OIL RECORD BOOK USERS GUIDE

After login, the user selects **“change/Create PIN”** and creates a signature.

If a signature is not saved, the user will need to create the signature each time, submitting an update. We are using test account **test user 1** or **test user 2** and password **marad1234** to capture the process of creating/resetting a PIN and Signature.

1. After login to eLogs, click on **Account settings** located at the top-right of the page:

Account Settings

2. On the user account settings page, click the **Reset Pin/Password** button and update your user PIN and Signature

OIL RECORD BOOK USERS GUIDE

3. If the user has an existing PIN (this applies recently created NSE accounts), the system will prompt the users to enter the **current Signature PIN**, **New Signature PIN**, and **Confirm Signature PIN**. If the user does not have an existing PIN (this applies for older NSE accounts), the system will prompt users to enter a **New Signature PIN** and **Confirm Signature PIN**. Type the new PIN, Confirm the new PIN, and **"Save"** to apply the change.

Cancel Save & Close

4. Log out of eLogs to apply the PIN update.
5. After login to eLogs, go to Accounts Settings. Select **Reset Pin/Password/Change Signature** to create your signature. At this point the system will prompt the user to enter the PIN number. Enter the PIN created and click **"Ok"**.
6. A box will open for the user to upload or sign a signature. Click the **"Upload"** option to use an existing signature that is saved locally on your computer. Use the mouse to create your signature and click **"Save"** to apply the update. The **"Clear"** option is to delete an existing signature.

Sign or upload your signature

Upload Clear

Save Cancel

OIL RECORD BOOK USERS GUIDE

7. Click on **Save & Close** to close Account Settings.
8. Saving the Signature is important, or the user will need to sign the signature each time submitting a record update. Below is an example: when the user clicks on **"Sign"** the signature window with an already existing signature will open. Enter the PIN and click **"Ok"** to complete submitting the record update.

The screenshot shows the 'CHARLTON: DECK LOG BOOK' interface. At the top, there are tabs for 'eLogs' and 'Book'. Below this is a section for 'Update record book entry' with a 'Departure' form. The form includes fields for Date (01-Feb-2026), Voyage No. (# 0001), From Port (Durrës (Durazzo), Albani), From Berth, To Port (Sarandë, Albania), and To Berth. Below the form is a navigation bar with various icons and a 'Sign' button. The 'Sign' window is open, showing a signature field with a blue ink signature and a 'Restore' button. A modal dialog titled 'Enter Your Pin Number' is also open, showing a 'Pin Number' field with the value '1111' and 'Ok' and 'Cancel' buttons.

9. This is number 9 E-log dashboard MARPOL BOOKS:

The screenshot shows the 'ABS WAVESIGHT' eLogs dashboard. The top navigation bar includes the ABS WAVESIGHT logo, user information (Welcome, DRGRANT (CHARLTON)), and system information (CHARLTON (Shipboard (Single-Ship)) (6.5.36) Production). The left sidebar shows 'eLogs' and 'System Administration' tabs. The main content area displays the 'DECK LOG BOOK' section with a red '1' indicating '1 Pending Verification, 0 Reverification'. Below this are sections for 'Awaiting Verification', 'Awaiting Acknowledgement', and 'Awaiting Submission', each with a 'Nothing to [action]' status. At the bottom, there is a section for 'Electronic Record Books (eLogs)' with tabs for 'Bridge', 'IMO', 'MARPOL', and 'MARPOL'. The footer shows the version (Ver. 6.5.36 (95)), copyright (© 2026 ABS Digital Solutions LLC dba "ABS Wavesight". All rights reserved.), last login (Last Login: 02/17/2026 08:49:02), and the ABS WAVESIGHT logo.

OIL RECORD BOOK USERS GUIDE

10. This is the oil record book dashboard. The icons are active, you click on them to make log entries as needed.
11. This is the Input Data Selection page/action operation page.
 - From the dashboard page please select the OIL RECORD BOOK PART 1:

12. Click on the **Create +** button to record your daily entries.

- template. Entries that are underlined in red are mandatory and must have to be completed for submission of the **eLogs** record.

Vessel's Last Known Status

Create

1. From the Electronic Record Books (eLogs) screen (ship level), select the **Oil Record Book Part I – Machinery Space Operations**.
2. On the record book menu, select the **Create** button. The record book's screen displays.
3. Select the appropriate **Record Date** and **Category**. The form will populate with additional sections for data entry.
